

## POSTERS

---

A Modelling Analysis of pH Change in Microbial Electrosynthesis (MES) Catholytes

[Eileen Yu](#)

Anaerobic cultivation of genetically engineered *Pseudomonas putida* in a bioelectrochemical system

[André Gemünde](#)

Bacteria Recognition-Extraction from Wastewater (BREW) for next generation microbial electrochemical technologies

[Jack Reeder](#)

Bioelectrochemical Methanation of CO<sub>2</sub> from Untreated Steel Mill Gas

[Sabine Spiess](#)

Co-metabolism of benzene and glucose in microbial fuel cells by synthetic communities

[Natalia Tyszkiewicz](#)

CO<sub>2</sub> conversion to formate – insight in electrolyte conditions

[Marc Pfitzer](#)

Comparison of different air cathode designs

[Peter Babiak](#)

Converting the offgas of hydrothermal carbonization into methane by means of electromethanogenesis

[Guillermo Pelaz](#)

Design, process control, and online measurement for a microbial fuel cell system targeting upscaling in wastewater treatment

[Sarah Brunschweiler](#)

Dual-cathode configuration and headspace gas recirculation enhanced microbial electrosynthesis from CO<sub>2</sub> using *Sporomusa ovata*

[Suman Bajracharya](#)

Effect of applied voltage on co-digestion of cattle manure and wastewater biosolids in Anaerobic Digestion-Microbial Electrolysis Cell (AD-MEC) systems

[Yasemin Dilsad Yilmazel](#)

Electrobioremediation of aromatic hydrocarbons using downflow METland® technology

[Eduardo Noriega](#)

Electrochemical behaviour of carbon nanofiber/PDMS composite used as a corrosion – resistant coating for copper in microbial fuel cells

[Bensalah Fatma](#)

Investigation of electrosynthetic acetate production by the novel cathodically active bacterium *Desulfosporosinus orientis*

[Annika Lenic](#)

Large-scale meta-analysis methodology for facilitating the scale-up of bioelectrochemical systems for wastewater treatment

[Florence de Fouchécour](#)

Microbial Electrochemical Snorkel (MES) for Nitrate Reduction

[Joanna Roginska](#)

On the use of MEC technology to treat exhausted vine stock wastewater

[Daniela Andrea Carrillo Peña](#)

Persistent biofilms com Dalí: Light sheet microscopy reveals growth of electroactive biofilms in 4D

[Anne Kuchenbuch](#)

Potentiostatic enrichment of electroactive biofilm communities derived from soil contaminated with petroleum products

[Bartosz Widera](#)

Prospecting for electrochemically-active hydrocarbon-degrading microorganisms for use in bioelectrochemical remediation of petroleum hydrocarbons.

[Belinda Yayork](#)

Random genetic mutagenesis in *Geobacter Sulfurreducens* induces high cytochrome activity to achieve high Cr (VI) in bioelectrochemical systems

[MD Tabish Noori](#)

Real-time monitoring and selective detection of micropollutants using a single chamber microbial fuel cell-based biosensor

[Abdelghani Ghanam](#)

RedStat: Leveraging open-source projects for laboratory infrastructure

[Carlos Sanchez](#)

Revealing the potential exoelectrogenic activity of bacteria mediated by their phenazine production

[Angel Franco](#)

Sense Fuet no són tapes: Bioelectrosynthesis scale-up and optimization - a fed-batch story

[Luis Rosa](#)

SMFC as a tool for the removal of hydrocarbons and metals in the marine environment: a concise research update

[Rosa Anna Nastro](#)

Stimulating Biofilm Formation of *Sporomusa ovata* for Improved Attachment on Cathode in Microbial Electrosynthesis

[Louise Vinther Grøn](#)

Sustainable Remediation of Crude Oil Contamination by utilizing a Bio-Electrochemical System (BES)

[Altaf Albaho](#)

Synthesis of biosurfactants from waste vegetable oil in air-cathode microbial fuel cell

[Aleksander de Rosset](#)

The role of the quinol dehydrogenase ImcH in *Geobacter sulfurreducens* energy metabolism

[Americo G. Duarte](#)

To the extreme: the effect of temperature on psychrotolerant *Shewanella loihica* and its electrical output in a microbial fuel cell

[Thessa Van Limbergen](#)

Unveiling the pathways for anoxic ammonium removal in a nitrifying bioelectrochemical system

[Miguel Osset Álvarez](#)

Unveiling the role of H<sub>2</sub> in the cathodic electron uptake by acetogenic bacteria

[Laura Muñoz](#)

Utilization of phenazines (pyocyanin and phenazine-1-carboxylic acid) by *Enterobacter aerogenes*

[Zubaish Saghir](#)

Voltammetric analysis of the extracellular electron transfer process: Diagnostic criteria for understanding and quantification.

[Jesús Alberto Pérez García](#)

Whole bacterial cell surface modified screen printed nitrate biosensor based on direct electron transfer of *Bacillus* sp. electropolymerized within polyaniline films

[Ola Gomma](#)
